## Produktliste

\* Hinweis zu Wirkstoff- und Dosis-Angabe: Angaben zu Wirkstoff und Dosis sind nicht einheitlich verfügbar. Wirkstoffe werden meist in Form eines Derivates (z.B. Bromid, Furoat) verwendet. Dosierungen beziehen sich je nach Produkt entweder auf die Grundsubstanz des Wirkstoffs (w) oder ein Derivat (d, Abkürzung). Weiters kann sich die Dosierung auf die abgefüllte (m, metered dose) oder auf dem Mundstück freigesetzte Menge beziehen (d, delivered dose). In der vorliegenden Tabelle wird unter 'Wirkstoff' stets nur die Steroid-Grundsubstanz angeführt (außer Derivate haben unterschiedliche pharmakologische Eigenschaften).

## Auswahl Inhalator

- Substanzgruppe ↔ Inhalator? → Möglichst den gleichen Inhalator-Typ für alle erforderlichen Substanzen verwenden (siehe Tabelle 1)
- Patienten-Kriterien – Inhalator-Typ? → Inspiratorische Flussrate des Patienten messen (z.B. In-check DIAL Inspiratory Flow-Meter) (siehe Algorithmus 2 (Erwachsene) & (Kinder))
- Inhalator-Eigenschaften? → Mentale und manuelle Fähigkeiten des Patienten beachten → Präferenzen des Patienten berücksichtigen (siehe Abbildung 2)
- Patienten-Instruktion? → führt zu Akzeptanz, Anwendungsfehler, Therapieadhärenz?
- Reevaluation – bei jedem Patientenkontakt kontrollieren! → Inhalatorzustand (am eigenen Inhalator) – Hygiene und Zustand des Inhalators – Adhärenz – Nebenwirkungen → eventuelle Wechsel des Inhalators. CAFE: Inhalatorwechsel nur in Absprache mit dem Patienten und erneuter Instruktion
